### “3d” VA measurement

- EM 6400, EM 6433, EM 6436 is equipped with “3d VA Measurement” capability. This accurately include Distortion power (D) per IEEE 100, into the VA Calculation

$$\text{So, } VA_{3d} = \sqrt{W^2 + VAR^2 + D^2}$$

- However Arithmetic VA=VA1 +VA2+VA3 is also available as a set-up option

### Demand Parameters Optional (for EM 6400 only)

- Monitors Demand - Present, Rising & Maximum, Time remaining
- VA or W or A demand is selectable through setup table
- User selectable demand interval through set up in steps of 5 minutes(5,10,15, 20, 25 & 30)
- Demand may be Sliding window (auto) or Fixed window (User), selectable through setup mode
- The time of occurrence for the Maximum Demand is based on “ ON hrs” of the system
- Maximum Demand can be cleared independently or along with the integrators through the CLR function
